

WHAT IS CLAIMED IS:

1. A multiproduct fuel dispenser for dispensing a plurality of fuels stored in a plurality of reservoir tanks, comprising:

a nozzle for dispensing fuel;

means for delivering fuel from said plurality of reservoir tanks to said nozzle; and

a common fuel meter operatively connected to said delivering means for quantifying the amount of fuel dispensed from said plurality of reservoir tanks.

2. The multiproduct fuel dispenser of claim 1, wherein said meter has an internal volume no greater than 0.1 gallons.

3. The multiproduct fuel dispenser of claim 1, wherein said delivery means comprises:

a plurality of conduits for receiving said fuel from said plurality of reservoir tanks, respectively; and

a single conduit connected to said plurality of conduits, said meter being connected to said single conduit.

4. The multiproduct fuel dispenser of claim 3 further comprising a valve associated with each of said plurality of conduits for controlling the flow of said fuel through said single conduit.

5. The multiproduct fuel dispenser of claim 1, further comprising a plurality of nozzles for dispensing fuel corresponding to said plurality of reservoir tanks.
